

Expectations for Popcorn Removal:

- There will be dust. We cannot eliminate it entirely.
- We use a Festool sanding and dust extraction system to capture as much dust as possible.
- We do not use water, as this increases the chances of ceiling damage and we believe that water belongs only in pipes & plumbing fixtures inside a home :)
- If we are removing popcorn in a room where we are not painting walls, we will use yellow frog tape (most gentle tape on market) to protect your walls. There is a chance the tape could pull paint from the wall upon removal. If this happens we will be happy to touch up the walls if you have the current wall paint.

Steps taken for dust minimization:

- We will close or plastic off the doors of the rooms we work in.
- If possible, a fan will be in the window venting dust out.
- We will turn off the HVAC system while we sand.
- We will use one set of tarps to sand, and take them outside when we are done.
- We will vacuum all floors when we finish.
- It is recommended to change the air filter once after the project is complete.
